# Instalasi DNSDIST Powerdns

Catatan tutorial instalasi dnsmdist pada sistem operasi centos 7-8/almaLinux 8 berikut ini

Beberapa hal yang perlu di siapkan preinstalasi

```
sudo dnf group install "Development Tools"
yum install automake autoconf -y
yum install ragel ragel-devel -y
yum install libedit-devel -y
yum install boost boost-devel boost-system boost-filesystem -y
yum install lua lua-devel -y
yum install gcc openssl-devel bzip2-devel libffi-devel -y
```

kemudian

```
wget https://downloads.powerdns.com/releases/dnsdist-1.9.2.tar.bz2
bunzip2 dnsdist-1.9.2.tar.bz2
untar dnsdist-1.9.2.tar
tar -xvf dnsdist-1.9.2.tar
cd dnsdist-1.9.2/
ls
./configure
make
```

konfigurasi

```
adduser dnsdist
```

```
nano /usr/local/etc/dnsdist.conf
```

Contoh

```
-- Define your Pi-hole DNS servers
newServer({address="8.8.8.8", name="google", checkName="google.com",
checkInterval=30})
newServer({address="1.1.1.1", name="opendns", checkName="opendns.com",
checkInterval=30})

-- Set the load balancing policy
setServerPolicy(roundrobin)

-- Listen on port 53 (DNS)
addLocal("127.0.0.2:53")

-- Use the console to manage dnsdist
controlSocket("127.0.0.3:5199")
setKey("2XCyp6q9keySARg=")
```

start

```
systemctl enable dnsdist  
systemctl start dnsdist
```

# DNSdist Command

```
dnsdist -C /usr/local/etc/dnsdist.conf -c
```

```
[root@smtp1 dnsdist-1.9.2]# dnsdist -C /usr/local/etc/dnsdist.conf -c  
>  
> showServers();  
# Name Address State Qps Qlim Ord Wt Queries Drops Drate Lat  
Pools  
0 dnsku1 [redacted] up 0.0 0 1 1 19 0 0.0 14.2  
1 dnsku2 [redacted] up 0.0 0 1 1 18 0 0.0 0.4  
2 google 8.8.8.8:53 up 0.0 0 1 1 18 0 0.0 0.3  
3 opendns 1.1.1.1:53 up 0.0 0 1 1 18 0 0.0 0.4  
All 0.0 73 0
```
