BASH: Cara Memonitor Port Online atau Offline

Berikut ini adalah script untuk memonitor port down atau online yang biasanya kita lakukan dengan telnet.

```
SERVER=gitlab.com
PORT=22
nc -z -v -w5 $SERVER $PORT
result1=$?

#Do whatever you want

if [ "$result1" != 0 ]; then
    echo 'port 22 is closed'
else
    echo 'port 22 is open'
fi
```

Selamat mencoba.
