Roundcube Change Password Connection Error Directadmin Driver

Permasalahan kali ini terjadi ketika merubah password email di roundcube kemudian keluar error seperti ini

Change password

Current Password:

New Password:

Confirm New Password:

Save

⚠ An error occurred!

Could not save new password. Connection error.

Padahal password sudah berhasil berubah. Bagaimana Solusinya?

1. Analisa

Setelah menelusuri ternyata sumber permasalahan terdapat pada file driver password directadmin yaitu pada file

plugins/password/drivers/directadmin.php

kodenya seperti ini

```
if($Socket->result_status_code != 200)
    return array('code' => PASSWORD_CONNECT_ERROR, 'message' =>
$Socket->error[0]);
elseif($response['error'] == 1)
    return array('code' => PASSWORD_ERROR, 'message' =>
strip_tags($response['text']));
else
    return PASSWORD_SUCCESS;
```

kode tersebut menyatakan jika result_status_code selain = 200 maka error. itulah sumber penyebabnya.

Hasil debug variable \$Socket dan \$response directadmin terputus :

```
Array ( ) HTTPSObject ( [version] => 2.8 [method] => POST [remote_host] => tcp://mail.domain.net:2222 [remote_port] => 2222 [remote_username] => [remote_password] => [result] => [result_header] => [result_body] => [result_status_code] => [lastTransferSpeed] => [bind_host] => [error] => Array ( [0] => Can't create socket connection to tcp://mail.domain.net:2222. ) [warn] => Array ( ) [query_cache] => Array ( ) [doFollowLocationHeader] => 1 [redirectURL] => [extra_headers] => Array ( ) )
```

menyatakan **[result_status_code]** bernilai null

dan hasil debug \$Socket dan \$response directadmin terkoneksi :

```
Array ( ) HTTPSObject ( [version] => 2.8 [method] => POST [remote_host] => tcp://mail.domain.net [remote_port] => 2222 [remote_username] => [remote_password] => [result] => HTTP/1.1 [result_header] => HTTP/1.1 [result_body] => [result_status_code] => [lastTransferSpeed] => 0.0087890625 [bind_host] => [error] => Array ( ) [warn] => Array ( ) [query_cache] => Array ( [0] => POST /CMD_CHANGE_EMAIL_PASSWORD HTTP/1.0 User-Agent: HTTPSObject/2.8 Host: mail.domain.net:2222 Accept: */* Connection: Close Content-type: application/x-www-form-urlencoded Content-length: 93 email=nama%40domain.net&oldpassword=passwdLama&password1=PasswdBaru&password2=PasswdBaru&api=1 ) [doFollowLocationHeader] => 1 [redirectURL] => [extra_headers] => Array ( ) )
```

menyatakan **[result_status_code]** bernilai null

itulah kenapa meskipun password sudah berubah tetap saja keluar error connection.

2. Solusi

cukup merubah status [result_status_code]
edit file

```
plugins/password/drivers/directadmin.php
```

kemudian ubah kode diatas menjadi kode ini

```
if($Socket->result == "")
    return array('code' => PASSWORD_CONNECT_ERROR, 'message' => $Socket->error[0]);
elseif($response['error'] == 1)
    return array('code' => PASSWORD_ERROR, 'message' => strip_tags($response['text']));
else
    return PASSWORD_SUCCESS;
```

Selesai.
