# Virtualizor Tasks table need to repair

Virtualizor kita keluar error seperti ini `_ "Could not make the Query. SELECT tasks.actid, tasks.action, users.uid, users.email FROM `tasks` LEFT JOIN users on tasks.uid = "_` maka bagaimana solusinya ?

Kita sudah menggunakan perintah repair disini

<https://www.virtualizor.com/docs/admin/repair-database/> dengan menjalankan perintah :

```
root# /usr/local/emps/bin/php /usr/local/virtualizor/scripts/repair_db.php
```

akan tetapi database dengan table tasks masih error, maka kita coba cari solusi lain yaitu dengan.

## 1. Pertama

Kita cari user dan password database mysql virtualizor, dimana bisa ditemukan disini

```
cat /usr/local/virtualizor/universal.php | grep db
```

kita catat user dan password mysql virtualizor tsb

## 2. Kedua

Login ke mysql virtualizor dengan cara

```
/usr/local/emps/bin/mysql -u root -p
```

kemudian masukkan passwordnya

setelah login coba repair.

```
mysql> use virtualizor
Database changed
mysql> repair table tasks;
+-----+-----+-----+-----+
| Table          | Op      | Msg_type | Msg_text
|
+-----+-----+-----+-----+
| virtualizor.tasks | repair | error    | Can't create new tempfile:
'./virtualizor/tasks.TMD' |
| virtualizor.tasks | repair | status   | Operation failed
|
```

```
+-----+-----+-----+-----+
-----+
2 rows in set (0.00 sec)
```

anda bisa perhatikan ada error pada './**virtualizor/tasks.TMD**'

pindahkan file tersebut ke tempat lain

```
mv /usr/local/emps/var/mysql/virtualizor/tasks.TMD /root/
```

kemudian ulangi repair

```
mysql> repair table tasks;
+-----+-----+-----+-----+
| Table          | Op      | Msg_type | Msg_text |
+-----+-----+-----+-----+
| virtualizor.tasks | repair | status   | OK       |
+-----+-----+-----+-----+
1 row in set (1.33 sec)
```

Berhasil, selamat mencoba
