Virtualizor Tasks table need to repair 1

Virtualizor Tasks table need to repair

Virtualizor kita keluar error seperti ini `_`“Could not make the Query. SELECT tasks.actid, tasks.action, users.uid, users.email FROM `tasks` LEFT JOIN users on tasks.uid = “_” maka bagaimana solusinya ?

Kita sudah menggunakan perintah repair disini

<https://www.virtualizor.com/docs/admin/repair-database/> dengan menjalankan perintah :

```
root# /usr/local/emps/bin/php /usr/local/virtualizor/scripts/repair_db.php
```

akan tetapi database dengan table tasks masih error, maka kita coba cari solusi lain yaitu dengan.

Pertama, kita cari user dan password database mysql virtualizor, dimana bisa ditemukan disini

```
cat /usr/local/virtualizor/universal.php | grep db
```
